(57) Abstract

PURPOSE: To output a slip or the like according to designated contents only by simply designating an extraction target file, record extraction conditions, the record name of an output record, item name and output target item or the like.

CONSTITUTION: When the parameters (such as the extraction target file, record extraction conditions, the record name of a sum-up record, item code, the item name of the sum-up record and sum-up target item) of tables A and B are defined from an input part 1, a table structure analysis part 5 analyzes the defined contents and prepares the various kinds of tables. An expansion file preparation part 9 reads out only the record matched with the extraction conditions from the extraction target file based on table contents. Thus, with the read records as sum-up targets, any records are summed up from them according to the defined contents of the tables A and B, and the summed-up result is printed out.
